

PRODUCT SAFETY & SUPPLY CHAIN SECURITY

Product safety is an integral part of our production.

From production to shipment, we work to maintain safe and responsible processes at every stage.

Product safety starts with ensuring that every product we deliver meets our standards for quality, reliability, and safety. At every stage of production, we place strong emphasis on identifying potential risks in advance and keeping them under control.

We continuously work to prevent metal and other unsafe objects from entering our products, maintain rigorous control procedures, and ensure that every process from production to shipment is carried out safely. This approach allows us not only to deliver safe products, but also to strengthen the trust we build with our customers at every stage.

OUR COMMITMENT TO PRODUCT SAFETY

Product safety is a responsibility as important as the quality of the products we deliver to our customers. A safe product is not only one that meets production standards, but also one that does not create risks for our customers during use.

For this reason, we consider product safety a fundamental part of our approach throughout every stage of production.

Safety requirements are even more critical for children's products.

For products intended for children, small parts, accessories, sharp or metal components, and other potential risks must be carefully assessed.

Ensuring that our products comply with relevant safety requirements and standards is a fundamental part of our commitment to delivering safe and reliable products to our customers.

As part of this approach, we implement systematic processes to prevent metal and other unsafe objects from remaining in our products, carry out the necessary controls, and identify and address potential risks during production. Because for us, product safety is not simply a checkpoint; it is a value that directly supports customer trust, product quality, and our responsibility as a manufacturer.

STRENGTHENING SAFETY THROUGH STANDARDS

Our commitment to product safety goes beyond our internal processes and is supported by internationally recognized standards and requirements. We continuously improve our systems to ensure that our processes remain safe, controlled, and sustainable, while validating our practices through independent assessments.

GSV FOR A SECURE SUPPLY CHAIN

Our GSV certification is an important recognition of our approach to maintaining a secure and controlled supply chain. In this context, security goes beyond protecting physical areas; it is managed through comprehensive and integrated systems involving multiple departments across our facility.

Through control mechanisms established in critical areas such as IT, Logistics, Physical Security, and Product Safety, we focus on identifying, preventing, and managing potential risks throughout our supply chain. From access controls and information security to shipment and cargo security and product safety practices, our processes are managed through defined procedures and established controls.

WITH THIS APPROACH, WE DO NOT VIEW SECURITY AS LIMITED TO THE PRODUCTION FLOOR. INSTEAD, WE CONSIDER THE SECURITY OF INFORMATION, PRODUCTS, AND SHIPMENTS AS ONE INTEGRATED RESPONSIBILITY.

THE SYSTEMS WE HAVE ESTABLISHED IN LINE WITH GSV REQUIREMENTS SUPPORT OUR COMMITMENT TO PROVIDING OUR CUSTOMERS WITH A SAFER, MORE CONTROLLED, AND MORE RELIABLE SUPPLY CHAIN.
